Fujitsu Expands the Halcyon multi-zone line

Fujitsu General America now offers 56,259 combinations to achieve greater “mix-and-match” flexibility for its Halcyon light commercial multi-zone heat pump line.

Halcyon multi-zone equipment offers ultra-high efficiency – with ratings of up to 18 SEER and 9.5 HSPF – quiet, reliable operation and sleek design. Contractors can select either 18,000, 24,000, 36,000 or 48,000 BTU outdoor units combined with wall-mounted, floor mounted, slim duct and compact cassette indoor units in 7,000, 9,000, 12,000, 15,000, 18,000, or 24,000 BTUs, depending on indoor style selected.

New to the lineup in 2014 is the addition of floor mount units in 9,000, 12,000 and 15,000 BTU/h. These small (less than 24” high and 30” wide) indoor units were developed specifically for residential and light commercial retrofit applications, ideally to replace standing radiators or any space with limited upper wall space like a kitchen or sunroom.

Also new in 2014 is the addition of 7,000 BTU/h compact cassette and slim duct models to the multi-zone lineup. Mix-and-match flexibility of evaporator (air handler) type and capacity allows installers to choose the indoor unit that best fits the application.
